EDUCATION

State University of New York - SUNY, Albany, NY **May 2026 - Expected**
Master of science in Digital Forensics and Cybersecurity

EXPERIENCE

Student Assistant: Athletics Department - University at Albany **Jan 2025 - Present**

- Provided technical support across 30+ enterprise systems, resolving user access, authentication, and system-related incidents to maintain operational continuity and security compliance
- Administered system configurations, patch updates, and Role-Based Access Control (RBAC) policies to enforce least-privilege principles and standardize secure access management
- Developed and maintained technical runbooks and resolution documentation, enhancing knowledge base efficiency and accelerating mean time to resolution (MTTR)

Cybersecurity Research Intern: National Security Agency - University at Albany **Sep 2025 - Dec 2025**

- Evaluated cryptographic RNG architecture across 4 platforms (Microsoft, Intel, Apple, Linux) under the NSA-partnered INSuRE program
- Assessed RNG compliance against NIST SP 800-90 and FIPS 140-3 standards using 10 defined compliance criteria focusing on entropy quality and DRBG architecture
- Discovered 15 security weaknesses in cryptographic RNG implementations through in-depth analysis of entropy sourcing and deterministic random bit generator (DRBG) design across multiple platforms

Verzeo EduTech: Cybersecurity Intern, Hyderabad, India **Aug 2022 - Oct 2023**

- Conducted penetration testing on 10 web applications using Metasploit and Nmap: identified and remediated 35+ critical vulnerabilities, preventing potential data breaches and improving overall system security posture
- Decoded malware samples using Python scripts and Wireshark, pinpointing the source of a critical zero-day exploit on the client network and implementing a patch within 48 hours
- Generated 20+ comprehensive incident reports aligned with NIST and ISO standards using Splunk, detailing security breaches and vulnerabilities, facilitating rapid remediation and minimizing potential damage

PROJECTS

AI-Based Intrusion Detection System | Python, Scikit-learn, tensorFlow/Keras **April 2026 - Present**

- Designed and implemented an AI-based intrusion detection system (IDS) to analyze network traffic and detect brute-force attacks (FTP/SSH) using a real-world benchmark dataset (CSE-CIC-IDS2018)
- Processed and engineered 79+ network flow features by performing data cleaning, label encoding, stratified data splitting, and feature scaling to prepare high-quality input for machine learning models
- Built and evaluated multiple models (Artificial Neural Network, Logistic Regression, Random Forest), achieving >99.9% accuracy, with Random Forest delivering the highest performance and minimal misclassification rates

Advanced Network Port Scanner | Python, Network Security, Multithreading **July 2025 - Aug 2025**

- Automated network assessments with a Python-based tool utilizing Tkinter for a GUI, reducing manual effort by 6 hours weekly; tool identified top vulnerability exploited by hackers, leading to immediate remediation efforts
- Implemented concurrent network operations, enabling scanning of 256 hosts in under 15 minutes, providing rapid assessment of the fastest turnaround time on the team and informing critical security updates
- Engineered a multi-threaded network port scanner utilizing a thread pool of 25 workers, achieving a 4x improvement in scan speed and solidifying subject matter expert status in concurrency

Comprehensive Cybersecurity Assessment & Penetration Testing Project **July 2022 - Dec 2023**

- Executed controlled exploit payloads, including keylogger deployments, using Metasploit, exposing vulnerabilities across 10 internal systems and informing the patch management strategy as the team's junior member
- Spearheaded simulated phishing campaign using Social Engineering Toolkit (SET); discovered 7 critical vulnerabilities in employee security protocols, improving the organization's security posture against social engineering attacks

SKILLS

- **Programming & Scripting:** Python, Bash, PowerShell, SQL, C/C++, R, Git/GitHub
- **Networking & Systems:** TCP/IP, DNS, HTTP, OS Internals, Network Troubleshooting, System Monitoring
- **Security & Analysis Tools:** Nmap, Wireshark, Splunk (SIEM), Nessus, Burp Suite, Metasploit, OSINT
- **Cybersecurity & Operations:** Incident Response, Vulnerability Assessment, Threat Analysis, Network Traffic Analysis
- **Frameworks & Standards:** NIST Cybersecurity Framework (CSF), NIST SP 800-53, NIST SP 800-61, FIPS 140-3
